Illinois Regional COVID-19 Resurgence Criteria

IDPH is monitoring key indicators to identify early but significant increases of COVID-19 transmission in Illinois, potentially signifying resurgence. These indicators are calculated for the 11 Illinois COVID-19 regions. IDPH will monitor if these indicators show an increase in the COVID-19 disease burden with a simultaneous decrease in hospital capacity. These indicators can be used to determine whether additional community mitigation interventions are needed for a region to control the further spread of COVID-19.

Indicators are calculated daily for each region based on the most current, complete data. Each indicator is compared to a pre-established threshold criteria to evaluate the COVID-19 disease burden and hospital resource capacity. By applying the same metrics to each region, IDPH uses a standardized approach to monitor the state as a whole while also monitoring regional trends.

All Regions are in Phase 4 (<http://dceocovid19resources.com/restore-illinois/restore-illinois-phase-4/>).

Resurgence Plan (/sites/default/files/COVID19/IL%20Resurgence%20Mitigation%20Plan%20-%20January%2022%2C%202021%20Update.pdf)

Tier 3 (/sites/default/files/COVID19/IL%20Tier%203%20Resurgence%20Mitigations%20-%20January%2018%2C%202021%20Update.pdf)

Tier 2 (/sites/default/files/COVID19/IL%20Tier%202%20Resurgence%20Mitigations%20-%20January%2022%2C%202021%20Update.pdf)

Tier 1 (/sites/default/files/COVID19/IL%20Tier%201%20Resurgence%20Mitigations%20-%20January%2022%2C%202021%20Update.pdf)

IDPH will continue to track the positivity rates and hospital capacity metrics in regions over 14-day monitoring periods to determine if mitigations can be relaxed, if additional mitigations are required, or if current mitigations should remain in place. For Tier 3 mitigation metrics to be relaxed (i.e., move to Tier 2), a region must experience less than 12% test positivity rate (7-day rolling average) for three consecutive days, AND greater than or equal to 20% percent available intensive care unit (ICU) (7-day rolling average) for three consecutive days, AND decline in the number of COVID-19 patients in the hospital (7-day rolling average) in 7 out of the last 10 days. Each of these metrics is described in more details in the methodology section on this page.

Data are provisional and are updated daily. Data updated: 5/17/2021

Region 1 Details

Region 1 ▼

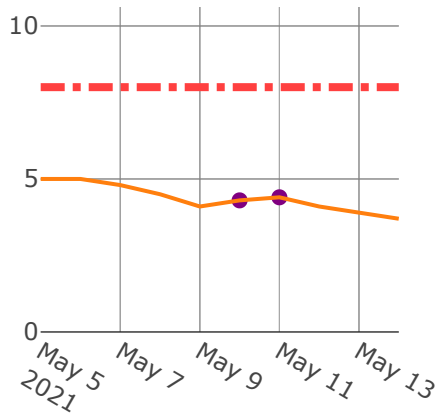

[All Time](#) [Last 30 Days](#) [Last 10 Days](#)

Test Positivity 7-Day Rolling Average

11 Consecutive Days under 8% threshold

● Daily Increases
--- 8% Threshold

Hospital Bed Availability 7-Day Rolling Average

ICU Beds:3 Consecutive Days \geq 20% Threshold

COVID-19 Patients in the Hospital 7-Day Rolling Average

10 Days of COVID-19 Patient Decreases or Stable
